Before you invest in any fund, consider how the fund would work with your other investments and your tolerance for risk.

This Fund is an alternative mutual fund. It invests in asset classes and/or uses investment strategies that are not permitted for conventional mutual funds. The specific strategies that differentiate this Fund from conventional mutual funds include increased use of derivatives for hedging and non-hedging purposes; increased ability to sell securities short; and the ability to borrow cash to use for investment purposes. While these strategies will be used in accordance with the Fund’s investment objective and strategies, during certain market conditions they may accelerate the pace at which your investment decreases in value.

What does the fund invest in?

The Fund seeks to maximize absolute returns for unitholders over the typical corporate credit cycle by providing a combination of income and capital gains while minimizing the volatility of returns. To achieve this investment objective, the Fund invests primarily in a concentrated but appropriately diversified portfolio of North American corporate bonds issued by non-investment grade publicly traded corporations and may also invest in other types of credit securities such as term loans, convertible bonds, preferred equity, and common equity securities.

Through the use of cash borrowings, short sales and derivative contracts, the Fund’s aggregate gross exposure will not exceed 300% of the Fund’s net asset value or as otherwise as permitted under applicable securities legislation. The leverage is calculated in accordance with the methodology prescribed by securities regulations, or any exemptions therefrom.

How risky is it?

The value of the Fund can go down as well as up. You could lose money.

One way to gauge risk is to look at how much a Fund's returns change over time. This is called "volatility".

In general, funds with higher volatility will have returns that change more over time. They typically have a greater chance of losing money and may have a greater chance of higher returns. Funds with lower volatility tend to have returns that change less over time. They typically have lower returns and may have a lower chance of losing money.

Risk Rating

NewGen has rated the volatility of this Fund as Low to Medium.

This rating is based on how much the Fund's returns have changed from year to year. It doesn't tell you how volatile the Fund will be in the future. The rating can change over time. A fund with a low risk rating can still lose money.

For more information about the risk rating and specific risks that can affect the Fund's returns, see the *What are the Risks of Investing in the Fund* section of the Fund's simplified prospectus.
